COMMERCIAL FINANCE OPERATIONS MANAGER

Overview:

Our client is looking for a finance professional who can combine strong accounting and commercial fundamentals with practical technology, automation and AI capability.

The role is designed for someone who can go beyond traditional finance management, identify inefficient processes and build better ways of working using software, automation and AI.

Responsibilities

- Review finance and operational processes and identify opportunities for improvement.
- Design and implement technology-enabled process improvements.
- Use AI tools to automate or improve recurring business processes.
- Work directly with software platforms, integrations and AI development tools.
- Apply accounting and commercial judgement when designing new processes.
- Use AI-assisted coding, low-code or no-code tools where appropriate.
- Translate finance and operational needs into practical system solutions.
- Collaborate with developers on more technical implementations.
- Test and refine new processes and automations.
- Continuously improve how finance and operational work is delivered.

Requirements

- Strong accounting and financial management fundamentals.
- Commercial finance experience.
- Practical experience using AI to improve or automate business processes.
- Exposure to tools such as Claude, VS Code or similar platforms.
- Ability to identify inefficient processes and build technology-enabled solutions.
- Comfortable working with systems, integrations and development tools.
- Experience with AI-assisted coding, low-code or no-code development would be advantageous.
- Strong analytical and problem-solving ability.
- Comfortable working across finance, operations and technology.
- Open to candidates from finance transformation, financial systems, product, accounting, audit or commercial finance backgrounds.
